

## Publications and Citations

The journal publications and citations for ARL authors on staff between 2010 and 2015 are summarized in the table below. The totals in each column represent the lifetime counts for each ARL author. The values were gathered using the Web of Science and Google Scholar search functions. Web of Science reports citations from refereed journal articles, scholarly book chapters, and published conference proceedings while Google Scholar also captures citations from technical reports, technical memoranda, science and technology magazine articles, conference papers, book chapters, and other science-related documents. Additional Citation Analyses conducted by the NOAA Central Library for ARL may be found on the Indicators of Quality, Relevance, and Performance webpage at:
